

SELF CONTAINED LUBRICATION FOR EXCAVATORS

ELECTRIC PUMP/REEL PACKAGE FOR EXCAVATORS

The installation of our Electric Pump Reel package allows operators the ability to lubricate every point on the host machine as well as adjacent machines. Using the Yamada KPL-24 Electric pump which is rated for 4G's and 4,000 psi provides reliable service in the harshest of conditions, including mining or on other construction equipment. The package includes a custom made pail hold down, and either a 50 ft or 85 ft 3/8" hose reel as required. The control valve allows easy on/off delivery of lubricant to every grease fitting on the machine.

This is the preferred option for machines working in a demolition environment where the potential exists for damaging hoses or other components typically used in an automatic lubrication system.
