CE

All ILC products must only be used for their intended purposes, as specified in this brochure and in all instructions. If the product is supplied together with user instructions, the user is required to read them and comply with them. Not all lubricants are suitable for centralised lubrication systems. ILC lubrication systems or relative components cannot be used together with gas, liquid gas, pressurised gas in solution and liquids with vapour pressure exceeding normal atmospheric pressure (1013 bar) by more than 0.5 bar, maximum temperature permitted. Any type of dangerous materials, namely those classified as such by European Community Directive (EC) 67/548/EEC, Article 2 (2), can only be used in ILC centralised lubrication systems or relative components upon consultation with ILC and after having received written approval from the company.

Applications

REV17112021

Features and benefits

The ILC Maximeter system has been designed to lubricate heavy duty and large machinery. The system consists of an Electric pump (ELEKTRA) which supplies the lubricant to a Single-line system equipped with CX, CM or CL valves. Each metering device supplies a single point and we can adjust its flow rate with precision.

The Maximeter systems have several advantages.

High performance pump

The Maximeter systems supply adjustable quantities of both grease and oil. Operation is not affected by changes in the lubricant temperature or viscosity. The metering devices can be located at great distances from the pump tanks.

Resistance

The Maximeter systems are suitable for work in difficult conditions, particular environments and temperatures below or above the standard.

Easy Installation

The Maximeter systems are simple to manage, install and maintain.

External Adjustment

The metering valves are externally adjustable without the use of special tools. Each point to be lubricated will receive the right amount of lubricant.

Visual Indicators

Each metering valve is equipped with an indicator which gives a visual indication of its correct operation. Troubleshooting is quick.

Simplified Maintenance

The replacement of the metering valves is quick and simple. It is not necessary to remove the line power supply connections or act on the adjacent metering devices: the replacement can be made between work cycles, without leakage of lubricant.

Applications

Front wheel loaders

Mining Trucks

Cement factories

Shredders

Digging buckets

Mining Dimensioners

Drag excavators

Port Loaders

Bucket Excavator

Slurry Pumps

Technical Data

ELEKTRA

27/41 Кд

180/200 kg

The 27 Kg and 41 Kg pumps are supplied with ILC tank of respective capacity.

Whereas, the 180 kg pump is designed for installation in standard 180 kg grease drums with 2" F perforated cover.

To simplify assembly (where the complete supply of drum cover is required) ILC provides an adapter plate that allows you to use any cover.

pump assembly does not require any drilling or mechanical machining of the drum cover. Only if the electric level is required, is it necessary to make a hole that allows reading the presser disc movement.

The pump is supplied with screws and gasket.

Main Components

REV17112021

Release Valve

The release valve is required to feed the single-line systems equipped with CX, CL or CM valves. It releases the system pressure so that the metering devices are ready for a new cycle and protects the system from any overpressure. It is supplied complete with Flex pipes for the pump and the tank return port.

Motor

The ELEKTRA electric pumps have a standard configuration that has a 24 V DC motor.

It is possible to supply single-phase motors 115 VAC, 230 VAC 50/60 Hz.

A72.079516	180

	Complete Tank
Part No.	Кд
A72.079506	27
A72.079507	41

The cover is supplied complete with screws, vent plug, gasket and lifting eyebolts. The tank order code also includes the complete cover.

Level Sensors and Presser Disc must be ordered separately.

Accessories

REV17112021

Overload Prevention System

The Overload prevention system is designed to improve the safety of workers. It helps prevent leaks that can cause slips and falls and reduce fire hazards. Compatible with any ELEKTRA grease tank, this product is easy to install, simple to use and reduces the labour work required to fill the tank, freeing personnel for other tasks.

It is made entirely of steel with anti-corrosion plating to withstand harsh environments, and is mechanically operated (does not require electricity).

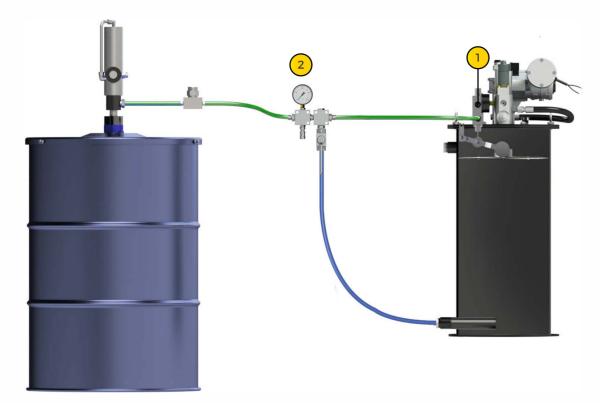

The system's high-pressure mechanical shut-off valves are available in ½ inch NPT. The system can be operated with or without our grease **Laser Level Sensor**, which can be connected to an indicator at the filling station or in the cabin.

The mechanical grease overflow prevention system is suitable for mining, aggregate and industrial applications, as well as for use on off-road construction machines. Optional components are available for customised installations.

ADVANTAGES

- Improves workers' safety
- Helps avoid cleaning and potential fines
- Easy to install; simple to use
- Mechanical: does not require electricity to work
- Operating pressures of up to 400 bar
- Operating temperature range from -40 to +70°C
- Excess grease goes back to the external tank

REV17112021

Laser Sensor (minimum and maximum level)

The laser level switch (Class 1) works together with the presser disc and provides a low and high lubricant level signal to the Controller.

> Part No. A91.111548

Presser Disc

The plate slides through the collar, along the pump rod, to ensure that the maximum amount of lubricant is used before topping up.

Dimensions	Part No.
27 / 41 Kg	A70.093768
180 Kg	31.600.4

Pressure switch

The pressure switch works together with the Controller. It monitors the lubricant pressure and reports to the Controller when the set pressure is reached. An adjustment ring nut allows to adjust the pressure between 40 and 400 bar. The pressure switch can be assembled at the end of the line.

> Part No. 49.066.7

Controller

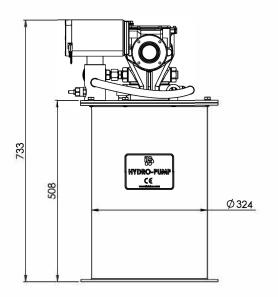

It allows adjusting the pause and work times, control alarms and, together with the pressure switch, ensure that the correct pressure is reached before deactivating the pump.
